1st International Workshop on Computational History

Data-driven humanities: teaching computers history so they can calculate the unknown June 27th 2014, RIA, 19 Dawson Street, Dublin 2, Ireland

The International Workshop on Computational History, which focuses on the challenges and opportunities of data-driven humanities, brings together world-leading scientists and scholars at the forefront of this emerging field, at the interface between computer science, social science, humanities and mathematics. As historical knowledge becomes increasingly available in forms that computers can process, it becomes amenable to large-scale computational analysis and interpretation. Mathematical analysis of the dynamic, evolutionary patterns observed in the data helps us to better understand the past and can even produce empirically-grounded predictions about the future.

This day-long event will be divided into two main sessions. The morning session will focus on *teaching computers history*. Computer scientists and digital humanities experts will introduce technologies and tools they have applied in order to extract knowledge from historical records in a form that can be processed by computers without losing its meaningfulness. The theme of the afternoon session is *calculating the unknown*. A collection of leading international scientists, working at the forefront of mathematical and theoretical analysis of historical data, will describe what is possible with current tools.

The workshop will be preceded by a public lecture, <u>The mathematics of impending social implosion</u>, on June 26th by Professor Peter Turchin. It will be held at 6-7:30pm in the Royal Irish Academy. Admission to the public lecture is free to all, and offered on a first-come, first-served basis (no registration required).

Location

Royal Irish Academy 19 Dawson St Dublin 2

Registration

Attendance at this events requires pre-registration. Tickets cost €20. Please use the eventBrite link below to register. A light lunch will be provided for all attendees.

Timetable

	Session 1: Teaching computers history Chair: Declan O'Sullivan	9am – 12.30pm
8.45	Registration	
9.00	Introduction & Welcome	Prof. Declan O'Sullivan, Trinity College Dublin Head of Intelligent Systems Discipline, School of Computer Science and Statistics
9.15	<u>Digitising History – why should historians care?</u>	Prof. Micheál Ó Siochrú, Department of History, Trinity College Dublin.

10.15 Digital Repository of Ireland and the importance of trusted digital preservation 10.30 Coffee 11.00 Irish Record Linkage: national opportunities and international obstacles 11.30 Seshat – the global history databank project 12.00 Building technology platforms for data curation Dacura and Linked Data 12.30 Lunch Session 2: Calculating the future Chair: Rob Brennan 1.30 Mathematical models of complex evolutionary processes – an introduction 2.00 Modeling population dynamics in Old World agrarian empires A network-based approach for studying technological evolution and revealing patterns of combinatorial change 3.30 Coffee Break 3.30 Geospatial Network Modelling of the Roman Empire Global-scale mathematical models of social evolution: investigating the development of the modern world 4.30 Panel Session: the way forward Dr. Natalie Harrower, Royal Irish Academy Dr. Ciara Breathnach, University of Connecticut Prof of Ecology, Anthropology & Mathematic, University of Ecology, Anthropology & Mathematics Dr. Kevin Feeney, School of Computer Science and Statistics, Trinity College Dublin Prof. Sergey Gavrilets, University of Tennessee Professor of Arts & Sciences, Mathematics, Ecology James Bennett, University of Washington Netflix VP, creator of Netflix prize Dr. Ioannis Psorakis Dr. Ioannis Psorakis Dr. Tom Currie, University of Exeter Lecturer in Cultural Evolution University of Exeter Lecturer in Cultural Evolution	9.40	<u>Technologies for extracting knowledge from historical records and archives</u>	Profs. Owen Conlan & Seamus Lawless, School of Computer Science and Statistics, Trinity College Dublin
11.00 Irish Record Linkage: national opportunities and international obstacles Dr. Ciara Breathnach, University of Limerick	10.15		Dr. Natalie Harrower, Royal Irish Academy
11.30 Seshat — the global history databank project 12.00 Building technology platforms for data curation—Dacura and Linked Data 12.30 Lunch Session 2: Calculating the future—Chair: Rob Brennan 1.30 Mathematical models of complex evolutionary—processes — an introduction 2.00 Modeling population dynamics in Old World agrarian empires A network-based approach for studying technological evolution and revealing patterns of combinatorial change 3.30 Geospatial Network Modelling of the Roman—Empire Global-scale mathematical models of social evolution: investigating the development of the modern world Dr. Chair Breatmach, University of Connecticut Prof of Ecology, Anthropology & Mathematics Prof. Peter Turchin, University of Connecticut Prof of Ecology, Anthropology & Mathematics Prof. Sergency Gavrilets, University of Tennessee Professor of Arts & Sciences, Mathematics, Ecology James Bennett, University of Washington Netflix VP, creator of Netflix prize Dr. Ioannis Psorakis Dr. Ioannis Psorakis Global-scale mathematical models of social evolution: investigating the development of the modern world Dr. Tom Currie, University of Exeter Lecturer in Cultural Evolution	10.30	Coffee	
12.00 Building technology platforms for data curation — Dacura and Linked Data 12.30 Lunch Session 2: Calculating the future Chair: Rob Brennan 1.30 Mathematical models of complex evolutionary processes — an introduction 2.00 Modeling population dynamics in Old World agrarian empires A network-based approach for studying technological evolution and revealing patterns of combinatorial change 3.00 Coffee Break 3.30 Geospatial Network Modelling of the Roman Empire Global-scale mathematical models of social evolution: investigating the development of the modern world Prof of Ecology, Anthropology & Mathematics Dr. Kevin Feeney, School of Computer Science and Statistics, Trinity College Dublin Prof. Sergey Gavrilets, University of Tennessee Professor of Arts & Sciences, Mathematics, Ecology Prof. Sergey Gavrilets, University of Tennessee Professor of Arts & Sciences, Mathematics, Ecology Prof. Sergey Gavrilets, University of Tennessee Professor of Arts & Sciences, Mathematics, Ecology Dr. Sergey Gavrilets, University of Tennessee Professor of Arts & Sciences, Mathematics, Ecology Dr. Sergey Gavrilets, University of Tennessee Professor of Arts & Sciences, Mathematics, Ecology Dr. Sergey Gavrilets, University of Tennessee Professor of Arts & Sciences, Mathematics, Ecology Dr. Sergey Gavrilets, University of Tennessee Professor of Arts & Sciences, Mathematics, Ecology Dr. Sergey Gavrilets, University of Tennessee Professor of Arts & Sciences, Mathematics, Ecology Dr. Sergey Gavrilets, University of Tennessee Professor of Arts & Sciences, Mathematics, Ecology Dr. Sergey Gavrilets, University of Tennessee Professor of Arts & Sciences, Mathematics, Ecology Dr. Sergey Gavrilets, University of Tennessee Prof. Serg	11.00		Dr. Ciara Breathnach, University of Limerick
12.30 Lunch Session 2: Calculating the future Chair: Rob Brennan 1.30 Mathematical models of complex evolutionary processes – an introduction Modeling population dynamics in Old World agrarian empires A network-based approach for studying technological evolution and revealing patterns of combinatorial change 3.00 Coffee Break 3.30 Geospatial Network Modelling of the Roman Empire Global-scale mathematical models of social evolution: investigating the development of the modern world and Statistics, Trinity College Dublin 1.30pm - 5pm Prof. Sergey Gavrilets, University of Tennessee Professor of Arts & Sciences, Mathematics, Ecology James Bennett, University of Washington Netflix VP, creator of Netflix prize Dr. Ioannis Psorakis Prof. Walter Scheidel, Stanford University Chair of Classics Global-scale mathematical models of social evolution: investigating the development of the modern world Dr. Tom Currie, University of Exeter Lecturer in Cultural Evolution	11.30	Seshat – the global history databank project	
Session 2: Calculating the future Chair: Rob Brennan 1.30pm - 5pm	12.00		
Chair: Rob Brennan 1.30 Mathematical models of complex evolutionary processes – an introduction 2.00 Modeling population dynamics in Old World agrarian empires A network-based approach for studying technological evolution and revealing patterns of combinatorial change 3.00 Coffee Break 3.30 Geospatial Network Modelling of the Roman Empire Global-scale mathematical models of social evolution: investigating the development of the modern world Prof. Sergey Gavrilets, University of Tennessee Professor of Arts & Sciences, Mathematics, Ecology James Bennett, University of Washington Netflix VP, creator of Netflix prize Dr. Ioannis Psorakis Prof. Walter Scheidel, Stanford University Chair of Classics Dr. Tom Currie, University of Exeter Lecturer in Cultural Evolution	12.30	Lunch	
1.30 Mathematical models of complex evolutionary processes – an introduction 2.00 Modeling population dynamics in Old World agrarian empires 2.30 A network-based approach for studying technological evolution and revealing patterns of combinatorial change 3.00 Coffee Break 3.30 Geospatial Network Modelling of the Roman Empire 4.00 Global-scale mathematical models of social evolution: investigating the development of the modern world Professor of Arts & Sciences, Mathematics, Ecology James Bennett, University of Washington Netflix VP, creator of Netflix Professor of Arts & Sciences, Mathematics, Ecology James Bennett, University of Washington Netflix VP, creator of Netflix Professor of Arts & Sciences, Mathematics, Ecology James Bennett, University of Netflix Professor of Arts & Sciences, Mathematics, Ecology Professor of Arts & Sciences, Mathematics, Ecology James Bennett, University of Washington Netflix VP, creator of Netflix VP, creator o			1.30pm - 5pm
2.30 A network-based approach for studying technological evolution and revealing patterns of combinatorial change 3.00 Coffee Break 3.30 Geospatial Network Modelling of the Roman Empire 4.00 Global-scale mathematical models of social evolution: investigating the development of the modern world Netflix VP, creator of Netflix prize Dr. Ioannis Psorakis Prof. Walter Scheidel, Stanford University Chair of Classics Dr. Tom Currie, University of Exeter Lecturer in Cultural Evolution			
2.30 technological evolution and revealing patterns of combinatorial change 3.00 Coffee Break 3.30 Geospatial Network Modelling of the Roman Empire 4.00 Global-scale mathematical models of social evolution: investigating the development of the modern world Dr. Ioannis Psorakis Prof. Walter Scheidel, Stanford University Chair of Classics Dr. Tom Currie, University of Exeter Lecturer in Cultural Evolution	1.30		Professor of Arts & Sciences, Mathematics,
3.30 Geospatial Network Modelling of the Roman Empire Prof. Walter Scheidel, Stanford University Chair of Classics Global-scale mathematical models of social evolution: investigating the development of the modern world Dr. Tom Currie, University of Exeter Lecturer in Cultural Evolution		<u>processes – an introduction</u> <u>Modeling population dynamics in Old World</u>	Professor of Arts & Sciences, Mathematics, Ecology James Bennett, University of Washington
5.30 Empire of Classics 4.00 Global-scale mathematical models of social evolution: investigating the development of the modern world Dr. Tom Currie, University of Exeter Lecturer in Cultural Evolution	2.00	processes – an introduction Modeling population dynamics in Old World agrarian empires A network-based approach for studying technological evolution and revealing patterns of	Professor of Arts & Sciences, Mathematics, Ecology James Bennett, University of Washington Netflix VP, creator of Netflix prize
4.00 evolution: investigating the development of the modern world Dr. Tom Currie, University of Exeter Lecturer in Cultural Evolution	2.00	processes – an introduction Modeling population dynamics in Old World agrarian empires A network-based approach for studying technological evolution and revealing patterns of combinatorial change	Professor of Arts & Sciences, Mathematics, Ecology James Bennett, University of Washington Netflix VP, creator of Netflix prize
4.30 Panel Session: the way forward TBC	2.00 2.30 3.00	processes – an introduction Modeling population dynamics in Old World agrarian empires A network-based approach for studying technological evolution and revealing patterns of combinatorial change Coffee Break Geospatial Network Modelling of the Roman	Professor of Arts & Sciences, Mathematics, Ecology James Bennett, University of Washington Netflix VP, creator of Netflix prize Dr. Ioannis Psorakis Prof. Walter Scheidel, Stanford University Chair
	2.00 2.30 3.00 3.30	Modeling population dynamics in Old World agrarian empires A network-based approach for studying technological evolution and revealing patterns of combinatorial change Coffee Break Geospatial Network Modelling of the Roman Empire Global-scale mathematical models of social evolution: investigating the development of the	Professor of Arts & Sciences, Mathematics, Ecology James Bennett, University of Washington Netflix VP, creator of Netflix prize Dr. Ioannis Psorakis Prof. Walter Scheidel, Stanford University Chair of Classics Dr. Tom Currie, University of Exeter Lecturer in

After the panel session, we invite you to continue the conversation in <u>Café en Seine</u>, 40 Dawson Street, just across the street.

ECTS Certificates for Attendance

The organisers recommend that student attendees receive 1-2 ECTS (European Credit Transfer and Accumulation System) of credit for researching the event background and speakers, participating in the workshop and writing a brief report for their supervisors or research group.

The organisers will provide signed certificates of attendance on request (please contact us on the day and we will print and stamp them for you).

Organising Committee

Prof. Declan O'Sullivan (general chair), KDEG, TCD Dr. Kevin Feeney (co-chair), KDEG, TCD Dr. Rob Brennan (co-chair), KDEG, TCD

Dr. Natalie Harrower (co-chair), DRI, RIA

Dr. Sandra Collins, DRI, RIA

Prof. Peter Turchin, UConn

Dr. Christophe Debruyne, DRI, RIA

This workshop has been partially funded by a New Foundations Grant from the Irish Research Council.
